Lukas Pabst

Full Stack Developer · Java & Angular

Personal Data

Name:	Lukas Pabst
Location:	Sissach (Basel Area), Switzerland
E-Mail:	lukas.pabst@outlook.de
Website & Profiles:	lpabst.dev · github.com/lukaspabst · xing.com/profile/Lukas_Pabst102
Date of Birth / Nationality:	23.03.2001 · German

Professional Experience

09/2024 – Present

Full Stack Developer
Primeo Energie (Primeo Holding AG), Münchenstein, Switzerland

- Developing Self-Contained Systems (SCS) for the customer portal with Angular and Java
- Technical ownership (Fachverantwortung) for the Java and Angular stacks and contribution to Solution Design
- Developing custom CMS apps for Magnolia and custom themes and plugins for Keycloak IDP
- Supporting technical coordination and code reviews with nearshoring developers

01/2023 – 08/2024

Software Developer
Finanz-Data GmbH, Gotha, Germany

- Backend development with Java and operational support in the HUK insurance environment
- Enhancing, designing interfaces for, and migrating legacy REST services to Spring Boot

Education

10/2019 – 10/2022

B.Sc. in Business Informatics (Dual Study Program)
Dual University Baden-Württemberg (DHBW), Stuttgart

Degree: Bachelor of Science · 3 years of dual practical phases in agile Java/Spring engineering (incl. BURDA project on AWS)

08/2011 – 06/2019

University Entrance Qualification (Abitur)
Staatliches Seiler-Gymnasium Schlotheim, Schlotheim

Qualification: Abitur

Technical Skills & Languages

Programming Languages:	Java, TypeScript, JavaScript, HTML, CSS/SCSS, SQL, Python, Groovy, PowerShell
Frameworks & Architecture:	Spring Boot, Angular (incl. Native Federation), React, Node.js, Self-Contained Systems (SCS)
Platforms & Databases:	Keycloak IDP, Magnolia CMS, PostgreSQL / MySQL, MongoDB, SQLite, RabbitMQ
DevOps, Tools & Testing:	Docker, Git, Jenkins, GitHub Actions, JUnit, Playwright, Postman, AWS, IntelliJ IDEA
Languages:	German (Native) · English (Fluent in spoken and written)

Project Overview (Enterprise)

Project: Primeo Energie – Customer Portal (09/2024 – Present)

Project Assignment: Development and architecture of the customer portal based on Self-Contained Systems (SCS)

Industry: Energy / Utilities IT · Role: Full Stack Developer (Technical Ownership Java & Angular)

Key Responsibilities:

• Architecting and building autonomous Self-Contained Systems (SCS) with decoupled domain logic, REST APIs, and independent deployments in Java / Spring Boot and Angular

• Driving code quality, architectural standards, and Solution Design across the portal's Java and Angular technology stacks

• Implementing custom login themes and authentication plugins (SPI) for Keycloak IDP and integrating content applications into Magnolia CMS

• Conducting code reviews, specifying work packages, and providing technical guidance to nearshoring development teams

Tools: Java, Spring Boot, Angular, Self-Contained Systems (SCS), Keycloak IDP, Magnolia CMS, Git, IntelliJ IDEA

Project: HUK-Environment (01/2023 – 08/2024)

Project Assignment: Operational support of the HUK insurance environment and REST service migration

Industry: IT / Insurance · Role: Software Developer

Key Responsibilities:

• Analyzing insurance domain workflows and specifying technical service contracts in Confluence and Innovator

• Incrementally migrating legacy REST services to modern Java and Spring Boot architectures while maintaining uninterrupted daily operations

• Building automated unit and integration test suites (JUnit, Postman) integrated into Jenkins CI/CD pipelines

Tools: Java, Spring Boot, REST, JUnit, Jenkins, Postman, Git, Confluence, Innovator, IntelliJ IDEA, Eclipse

Project: BURDA Timetracking (2019 – 2022)

Project Assignment: Development of an internal time-tracking web application where employees log, edit, and submit working hours with an HR approval and rejection workflow.

Industry: IT / Media (DHBW Dual Study Project) · Role: Software Developer

Key Responsibilities:

• Gathering and documenting functional requirements with stakeholders and project management in an agile Scrum team

• Designing and implementing the web application, writing automated tests, and deploying services on AWS

Tools: Java, Spring, Scrum, AWS, Postman, Git, IntelliJ IDEA

Selected Personal & Open-Source Projects (lpabst.dev)

All live demos, architecture overviews, and repositories can be explored directly on **https://lpabst.dev**.

JourneyLink – Group Travel Platform & SCS Architecture Project (demo.journeylink.dev · github.com/Journey-Link)

• Group travel platform (client-side .ics calendar matching, real-time voting, expense splitting) & B2B marketplace with a fault-tolerant Angular 20 Native Federation shell and 12 remote apps

• Event-driven backend (6 Kotlin / Spring Boot 4 APIs, 10 Node.js / Express services, Python 3.12 FastAPI crawler) with 16 isolated MongoDB databases (enforced via ArchUnit), RabbitMQ AMQP, Redis, Clerk JWKS, AES-256-GCM, and Prometheus/Grafana container monitoring

zeN-UI & Capri CLI (ui.lpabst.dev · github.com/lukaspabst/zeN-UI) · zeN-Terminal (terminal.lpabst.dev)

• Cross-framework UI library (@zen-ui/system, 51 components for React 19, Angular 20+, Web Components) with 8 themes, interactive Three.js WebGL scene, Playwright tests, and CLI security linter (capri-guard)

• PowerShell 7 & Windows Terminal theme engine integrating Oh My Posh, Fastfetch, btop, PSReadLine Enter-key safety check, and an interactive web catalog at terminal.lpabst.dev

Discord Translation Bot (github.com/lukaspabst/dc-translation)

• Multilingual Discord bot (Node.js 22, TypeScript 5.8, discord.js 14) featuring private live translation threads, multi-provider translation fallback, AES-256-GCM encryption, and L1/L2 SQLite caching
